

Science Club

The Catholic Science Club

In 2019, Saint Rose Academy began an after-school science club for Middle School students. The Catholic Science Club was the inspiration of, then, four sixth grade students. The purpose of the club is to learn about the great Catholic scientists who have contributed through their ingenuity and faith to various areas of science and to explore topics in science that are beyond the scope of the science curriculum. Currently, the club is facilitated through four eighth graders who serve as Core Team Members who assist with presentations and preparations for club meetings. Some of the meeting topics have included: the science of flight, optical illusions and the human eye, and human stem cell research: what is it and what does the Church teach about it and why? Through the Catholic Science Club meetings, students experience the oneness between faith and science.

Grades 6-8 students who wish to gather every other week for an opportunity to unite faith and reason by learning about saints who have studied and expanded the sciences, a fun activity or experiment, and a snack, may do so. Contact Sister John Agnes for further details.
