

## How to have a Scientifically Super Summer

Looking for something Scientific to do on that first rainy day of summer? Perhaps there is a morning in August where you just don't want to go to the beach or pool again. Create a "Summer Science Postcard"! It's a fun and easy way to share something scientific with your classmates when we return to Science Lab in September.

Here is how to do it:

- Think of a topic. It can be a place that you visited over the summer or even a quick and easy experiment that you do. You can discover something scientific while you are at the beach or pool, on vacation or even in your own room! For example - go shell collecting and then organize your shells into groups based on how they look. Conduct an experiment and write about it. Or write about a place you visited on vacation. There are so many possibilities!
- Draw a picture or attach a photo of your discovery or experiment.
- Write several sentences describing what you discovered, what you saw or what you did.
- Don't forget to sign your name and your new grade.
- Bring in your postcard the first week of school. We will share them in Science Lab with Mrs. Mitchell and your new class and hang them in the hallway for everyone to enjoy.

**\*\*This program is completely optional\*\***
