**Seton Raynor created this task.** Yesterday at 9:15am

Seton Raynor assigned to Seton Raynor. Yesterday at 9:15am

**Seton Raynor** Yesterday at 10:32am

[@Natalie Bertagne](#), here is the list! It's quite a few places...

**Natalie Bertagne** Yesterday at 3:56pm (edited)

Hmm okay it did not affect much in base! I think buttons are the only wild card that could be affected in CDs. What are your thoughts? I think maybe we err on the side of caution and remove that part from base? Then we can ask testlio or internal testers to check these elements in the individual themes listed above and make sure alignment hasn't been messed up or anything as a result of the line height changes. What are your thoughts?

**Seton Raynor** 3 hours ago

Yes, I think that makes the most sense, just to be safe. I'll put it back through now. [@Karen Lackey](#), these are the places that will be affected on each relevant theme—we will be removing the changes from Base so that CDs aren't affected!

Seton Raynor assigned to Karen Lackey. 2 hours ago

**Natalie Bertagne** 50 minutes ago

[@Karen Lackey](#) we took away the changes to base to avoid any repercussions in CDs. So the themes listed above are the only ones affected by this ticket. The elements listed in each theme are the elements that had their line height changed. We just need the tester(s) to check each of these elements on a couple of different browsers to make sure that the alignment and the text height look right. It does not need to be compared to the previous alignment/height, we just need to make sure that it does not look broken in any way. The slideshow captions and a few others will need to be checked for how many lines of text they allow before they cut it off. That information will be added to the test plan.

[@Seton Raynor](#) most of these elements are just going to need the alignment/line height checked but a few of them are going to need to make sure that the max number of lines is visible and any further lines get cut off. These would be the slideshow captions, button subtext, and maybe some other elements. Not sure. Can you please go through the items above and note if they specify a max number of lines and what that # is? Then we can verify that we are still cutting it off at the right height.
